

MOHAMMED FAYD MOMOH

Product Designer

Lagos, Nigeria | +234 812-363-2178 | momohfayd@gmail.com | behance.net/4fb42c93 | linkedin.com/in/fayd-momoh-970976273

PROFESSIONAL SUMMARY

Product Designer with roughly three years of experience designing user-centric digital products across health-tech, logistics, productivity, and community platforms in emerging markets. Consistently takes ambiguous, ill-defined problems and turns them into shipped, measurable outcomes through research-driven design systems, accessible UI patterns, and end-to-end ownership from concept to high-fidelity execution. Combines a foundation in Telecommunications Engineering with strong cross-functional collaboration, partnering closely with product and engineering teams to ship work that moves real business and user metrics.

CORE SKILLS

- Product Thinking & Information Architecture
- Interaction Design, User Flows & Prototyping
- UX Research & Usability Testing
- Design Systems - Components, Tokens & Documentation
- Accessibility & Inclusive Design (WCAG, Contrast, Screen Reader Considerations)
- Figma, FigJam, Framer, Rive, HTML/CSS, Git
- Motion Graphics & Content Design (After Effects, CapCut, Canva)

PROFESSIONAL EXPERIENCE

Product Designer (Freelance/Contract), Notespace	Early–Mid 2026
• Brought in to build a note-taking and productivity app with no existing design foundation, I took on the role of sole Product Designer, owning the process end-to-end from initial concept through a complete design system and high-fidelity UI — resulting in a cohesive, production-ready interface built to scale. • Tasked with giving the product a consistent visual language, I defined the full design system from scratch — typography, components, and layout patterns — establishing a reusable foundation that supported faster, more consistent feature development going forward.	
Product Designer, Psychology Hub (NAPS Student Hub)	Nov 2024 – May 2025
• Faced with 50+ complex feature requirements at risk of causing miscommunication between design and engineering, I worked with the Product Owner to translate them into detailed user stories and acceptance criteria — reducing ambiguity in sprint planning and streamlining developer hand-off. • Tasked with unifying 4+ fragmented, informal communication channels, I led user research and end-to-end journey mapping to inform the platform's structure — resulting in a single verified platform that replaced scattered, untracked tools. • To fix an untracked, informal mentorship process, I redesigned the experience from the ground up — delivering a structured apply-match-communicate-feedback loop that gave the program measurable structure for the first time. • Charged with ensuring design consistency and accessibility at scale, I built and documented a component-based design system with WCAG-aligned contrast, partnering with developers through Agile sprints to QA-test implementation — delivering accessible, pixel-perfect UI across web and mobile. • Faced with ad hoc, last-minute event announcements and an unmanaged resource library, I introduced an admin-gated approval workflow and a structured RSVP system with calendar integration — replacing disorganized processes with reliable, repeatable systems.	
Product Designer, Spark Deliveries	2024

- Faced with low user trust and recurring delivery fulfillment issues, I led user research through screener surveys and WhatsApp interviews to uncover root pain points — translating findings into personas and user flows that directly shaped features like real-time tracking and multi-stop delivery.
- Tasked with creating a scalable visual system for the app, I developed a 4-point grid design system covering typography, color, and reusable components — applying it across 47 high-fidelity, responsive screens in Figma.
- To sharpen the app's competitive position, I conducted a competitive analysis against GIG Go, DHL, and Uber to identify feature gaps — then iterated on prototypes through structured usability testing to validate the improvements.

Product Designer, *Purpival Carnival*

2023 – 2024

- Tasked with promoting a multi-university carnival with limited existing digital presence, I designed and launched a responsive landing page targeting 8 universities across Minna, Niger State — increasing event visibility and ticket engagement.

EDUCATION

Bachelor of Engineering in Telecommunication Engineering

Federal University of Technology, Minna, Nigeria — 2024

CERTIFICATION

- I4G x Zuri Cohort 2 Scholarship Program — Product Design Track

TECHNICAL SKILLS

Figma, FigJam, Framer, Rive, HTML/CSS, Git, Adobe Photoshop, Illustrator, InDesign, After Effects, Premiere Pro, Final Cut Pro, Canva, CapCut
